About IUEC

The International Utilities and Energy Conference is an invitation-only forum for senior industry executives to examine the business, economic, political, and social trends that are transforming energy markets. With speaker-led plenary sessions,

facilitated roundtable discussions, and scheduled time for peer networking, attending executives have the opportunity to create and re-establish industry contacts, share ideas, and access the industry's leading strategic thinkers.

We invite you to attend Accenture's International Utilities and Energy Conference 2012.

About Accenture

Theme

In times of uncertainty and volatility, how can executives manage an interconnected energy system regardless of changing economic conditions? There is no single solution. We can anticipate a diversified energy system will be required to adapt to the range of challenges and opportunities we face across the entire energy value chain.

Managing this evolving energy system demands innovation and business agility. It requires innovation to unlock existing resources, enhance collaboration, develop the technologies needed to harness new sources of energy, and drive efficiency savings.

Agility in navigating short-term economic cycles and managing ever-changing policy directives, while keeping an eye on long-term strategic goals, is essential.

While regulation is necessary to helping consumers and companies embrace the future, policy must keep up with (or stay ahead of) coming changes. This will only be possible with the active participation of the industry engaging with policymakers. To achieve success, capital investments will continue to rise to unprecedented levels. Ensuring capital investment delivery excellence will be key.
